

Design-led Innovations for Active Ageing

Final event
Disseny Hub, Barcelona
24 & 25 April 2014

One of the fundamental challenges facing Europe is the ageing of its population. Europe urgently needs innovative solutions and improved policies that enable efficient and effective social and health care services. The Design-led Innovations for Active Ageing project (DAA) brought together eight cities that were determined to come up with sustainable solutions for demographic ageing. The project's ultimate goal was to contribute to social innovation and public sector transformation in the area of senior care, and it wanted to do this by combining the experience of senior care specialists with the expertise of service designers.
